BE Project Information	
Project Title	Instant Aid App : For Emergency Help(Android App)
Description	Whenever an emergency strikes, the person stuck in such a situation needs immediate assistance. And, in order to get the assistance, the person should first be able to convey a message for help easily. The given system will be able to provide users in emergency situations a faster means to seek help. The user just needs to have a smartphone with android platform and the application installed on it. Then the user can register his/her number and select certain contacts as emergency contacts. The user will be able to generate an emergency message by pressing the application's specified button, or pressing power button and shaking the phone. Whenever a message generation is triggered, the server will find out the nearest contacts message through various methods - the ones to whom the help requests must be sent. This help request will also consist of the user's current location so that the user may be found easily. This application will be helpful for specially-abled people, women, senior citizens or even a normal human seeking for emergency help.
